

NAVODDBHAVA

Agripreneurship through Innovative
Agriculture

Date: 29th-30th April, 2024

in Collaboration with
ICAR - Indian Institute of Vegetable Research
Varanasi

Venue: M.P. Hall, Udai Pratap College, Varanasi

About Agrivision

In 2015, Agrivision was established with a mission to support the holistic development of agricultural and allied science students, covering fields such as veterinary, dairy, horticulture, home science, sericulture, fisheries, and forestry. It aims to achieve this by providing high-quality education, creating platforms for employment and entrepreneurial opportunities, and fostering connections between students and farmers. As a social platform, Agrivision advocates for agricultural reforms and strives to cultivate a positive, secure, and prosperous environment for graduates while also uplifting the moral stature of farmers. Since its inception, Agrivision has organized regional and national conventions on various themes relevant to the community's interests. It has proposed agricultural education and research initiatives to policymaking agencies like ICAN and MOA&FW, contributing to the enhancement of agricultural education. Agrivision has also presented a memorandum to the Honorable Minister of Agriculture and Farmers Welfare, outlining a ten-point agenda that includes the establishment of the Indian Agriculture Service and the implementation of agricultural courses in primary and secondary education, among other vital initiatives.

Background of workshop

In agriculture today, the innovation system benefits from a balance of both exclusive and nonexclusive access to patented technologies to effectively support new technology development and to provide both commercial growers and subsistence farmers with the best technology possible for their crops. Innovative Farmers is a network of farmers and growers who are running on-farm trials, on their terms. These field labs have increased farmers' confidence in on-farm experimentation and innovation. They have also highlighted to the research community the benefits of collaboration with farmers.

Objectives:

1. To provide an opportunity for participants to know about different aspects of innovative Agriculture And Agribusiness
2. To provide a platform to bring together all the stakeholders and get their practical insights.
3. To provide students and research scholars an opportunity to interact with industry leaders.
4. To showcase practical transformation of theoretical knowledge.
5. To create awareness about the promising impacts of innovative Agriculture & its allied fields

Themes of workshop

- Innovative Agriculture
- Agri-start-up and Agribusiness
- Rural development through Agripeneurship
- New prospects in agribusiness .
